

Ultra Ridge System - Ridge Union

CODE GDRR-ULTRA-RU

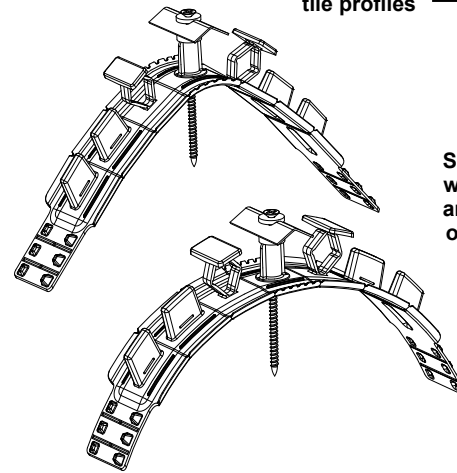

Description

The Ultra Ridge Union is designed to provide a mechanical fix for ridge and hip tiles, the union sits between two adjacent tiles and holds them together whilst securing them to the roof structure. The product can be fitted on to both round and angled styles of tile, with the flexible profile easily contouring to the shape of the tile to allow the next tile to be easily slotted into the other side of the union; this process is continued along the full length of the ridge/hip. Once all of the tiles are correctly laid, the unions are secured by driving a screw and clamp assembly through the central hole and into the mounting batten below. The screws should be tightened down so that the clamp presses down on the ridge tile securing it in position.

The union forms part of Manthorpe's Ultra Ridge System which can be purchased as a kit, with all the parts required to cover a run of 3 or 6 metres when using 450mm long ridge tiles. For details using shorter tile lengths, an additional kit of unions can be purchased to allow the fixing of the additional tiles.
