102.5MM

MORTAR STRIP

BED TRAY TOP AND
BOTTOM WITH MORTAR

FITTING LEAD

① Wait until mortar is dry and wall is stable then pull out mortar strip to leave a 25mm slot

② Push lead into the gap ensuring it fits under the Cavity Tray. Secure lead flashing using lead wedges as per normal practice.

③ Dress lead down into position and point with a suitable flexible lead sealant.

For further information on the fitting and dressing of lead refer to the 'Lead Sheet Manual' available from the Lead Sheet Association.

TITLE	DIFFERENT LEAD TYPES	CODE
-------	----------------------	------

Depending upon the application different sizes of lead should be used

For general details and normal exposure areas code 4 lead is recommended. For severe exposure areas code 5 lead is recommended

Fig. 1 shows a typical abutment situation using lead soakers.

Fig. 2 shown an abutment flashing and secret gutter detail. Secret gutters are traditionally made from lead but are now more commonly bought preformed in GRP.

Fig. 3 shows a long lead application. In this detail the lead is dressed over the tile in one continuous piece then moulded into the contours of the tile. This type of flashing should only be used on contoured roof finishes.

FOR FURTHER TECHNICAL
INFORMATION ON THE
FITTING OF LEAD SHEET
REFER TO

THE LEAD SHEET MANUAL
Available from
LEAD SHEET ASSOCIATION
