

## 5" Core Drill Ventilator

CODE G900

### Description

The Manthorpe 5" Core Drill Vent is designed predominantly for use when ventilating a gas appliance, although can be used to supply general through wall ventilation as well. The kit includes a cowl vent for exterior use, a louvre grille for interior use, a 350mm length of pipe duct and an optional anti-draught baffle which reduces the airflow and also the feel of a draught through the vent. **Without the use of the anti-draught baffle**, the free area of the vent is 100cm<sup>2</sup>, enough to supply an appliance with a rated input of 27kW or 92,000 Btu/h (in accordance with BS5440 Pt.2:2000). **With the anti-draught baffle installed**, the effective free area of the vent is reduced to 70cm<sup>2</sup> (BRE tested) providing enough ventilation for an appliance with an input rating of 21kW or 71,500 Btu/h. The vent can easily be fitted in both refurb and new build situations with the use of a 5" (127mm) diameter core drill.
