

Airbrick Flood Defence Cover

CODE G980

Description

The cover for the Airbrick Flood Defence is designed to be a removable flood barrier for a 9"x3" airbrick. In the event of a flood warning, simply clip the cover onto the wall mounted frame, forming a watertight barrier. There are 6 clips around the cover which lock it to the frame, each of them easily unlockable with one hand. The cover houses a Ø 4mm Neoprene O-Ring seal which presses against the frame when clipped together blocking out the flood waters. The cover is bright yellow to remind the user to remove it once the flood waters have gone to help the property dry out. They are flat and easy to store away when not in use.

Specification	
Colours - Cover	Yellow
Packing Details	Sealed in a bag with fitting instructions, 10 units in a box
Weight	0.109kg
Material	Cover: Polypropylene O-Ring: Neoprene
Manufacturing Process	Injection moulded
